Safety tile manufacturing

- ◆ Safety surfacing tiles are a shock absorbing resilient rubber mat that provides long term answers to safety
- ◆ Safe, clean play area: Harmful objects can hide in loose-fill products like san. Wood chips or gravel. Bounce back's solid construction does not allow foreign objects to hide. There is also no loose fill material for children to kick, throw or swallow

- ◆ Allows play year round: Design allow for a continues use even during the rainy season. Because water dose not puddle on the surface, but moves quickly through the top and through le legs of cushions the play area is ready for use soon after heavy rain.
- ◆ Virtually maintenance free: no daily maintenance required to maintain safety standards means less cost and less hassle. It looks and performs great!
- ◆ 24-7-356: Proper safety and protection 24 hours a day 7 days a week, 365 days of year. Unlike loos fill products in the most critical fall zones dose not displaced by children during activities.
